

Noradiol

Composition:

Each uncoated tablet contains :
Norethindrone USP.....10mg
Ethinylestradiol USP.....0.02mg

Pharmacological Classification: Hormonal contraceptives

Pharmacological Properties :

Noradiol is shared between :

progesterone (Norethindrone)
Estrogen (Ethinylestradiol)

This participation leads to inhibition of ovulation and changes in the lining of the uterus

Mechanism of action:

Norethindrone works by offsetting the effects of the natural hormone progesterone.

✓ Ethinylestradiol affects the secretion of Gonadotropins from the pituitary gland. It discourages ovulation and prevents breast engorgement. Maintains calcium and phosphorous and promotes bone formation.

Indications:

Noradiol is used to prevent pregnancy in a woman who chooses to use oral contraceptives as a method of contraception.

Cessation or absence of menstruation (menstruation)

Delayed menstruation for reasons other than pregnancy, lactation or menopause
